PROFESSIONAL SUMMARY

Operations and supply chain professional with roughly eight years of experience across business operations, international logistics, quality leadership, manufacturing engineering and technology-enabled process improvement. Experience includes leading teams, managing 3PL and supplier relationships, running S&OP and operating cadences, building KPI/SOP systems, analysing inventory and cost, strengthening quality controls and coordinating business technology. At Rattan Direct, delivered approximately GBP 520,000 in annual logistics savings and reduced returns by cubic volume from about 12% to 4%; at Tile & Carpet Centre, reduced customer complaints from about 10% to 5% while improving manufacturing rejection rates. More recently at Optimise Outsourcing, built a 19-KPI leadership scorecard, created around 10 SOPs, strengthened Microsoft 365/Teams/SharePoint administration and supported practical workflow automation. Combines strong Excel and operational analysis with practical ERP/WMS/SAP exposure and developing n8n/API/automation capability, positioned as an operations enabler rather than software-engineering specialism.

SELECTED IMPACT HIGHLIGHTS

Approx. GBP 520,000 annual logistics savings - restructured warehouse/3PL and final-mile cost models, contributing about GBP 400,000 in warehouse/3PL savings and about GBP 120,000 in last-mile savings.

Returns reduced from about 12% to 4% by CBM - used return-cause analysis, supplier-quality action, packaging changes, handling reviews and last-mile performance management across a 6,000-7,000 CBM annual flow.

Manufacturing and customer quality improved - at Tile & Carpet Centre reduced tank rejection from about 5% to 2%, pipe rejection from about 8% to 4%, and customer complaints from about 10% to 5%.

Leadership operating system strengthened - designed a 19-KPI scorecard and about 10 SOPs at Optimise Outsourcing, combining customer, workforce, recruitment, commercial and execution metrics into regular management reviews.

Business technology administration expanded - managed Microsoft 365 user lifecycle, licensing, MFA and shared mailboxes; strengthened Teams/SharePoint governance; built Power Automate service-intake workflows; coordinated ESET, DNS/email authentication, hosting/backups and SaaS/vendor administration.

CORE SKILLS & COMPETENCIES

Operations & Business Operations - Leadership cadence, KPI governance, SOPs, executive reporting, issue resolution, finance administration and cross-functional execution.

Supply Chain & Logistics - International freight, container planning, demand planning, inventory, 3PL warehousing, inbound/dispatch, final mile, reverse logistics and demurrage control.

3PL, Supplier & Commercial Management - Rate-card comparisons, contract/SLA negotiation, payment terms, due diligence, service performance and cost-structure analysis.

Quality & Continuous Improvement - Supplier and manufacturing quality, CAPA, root-cause analysis, Pareto, APQP, PPAP, PFMEA/FMEA, Control Plans, MSA, SPC and ISO 9001-based systems.

Leadership & Stakeholder Management - Managed five direct reports at Rattan Direct and six quality inspectors at Tile & Carpet; coordinated China quality teams, 3PLs, suppliers, customers, contractors and senior leadership.

Data, Planning & Performance Management - Strong Excel-based analysis, Power BI working capability, KPI scorecards, S&OP, forecasting, rejection/returns analysis, cost modelling and management reporting.

Business Technology & IT Operations - Microsoft 365, Teams/SharePoint, Power Automate, ESET, Keeper, Cloudflare DNS, hosting/domain administration, email deliverability and technology-vendor coordination.

AI & Workflow Automation - Strong LLM/ChatGPT user; practical Make.com workflows; developing n8n, APIs, JSON, webhooks and OAuth; beginner Git/GitHub and Python.

PROFESSIONAL EXPERIENCE

OPTIMISE OUTSOURCING | Operations Manager & EOS Integrator | Oct 2025 - 2026

British-Kenyan outsourced talent/business-services environment | Business operations, executive support, finance administration, business systems and technology operations.

Acted as EOS Integrator, translating leadership priorities into departmental execution, running/structuring Level 10 and SLT cadence, supporting quarterly strategy and Rocks, and driving issue resolution and accountability.

Designed the full 19-KPI leadership scorecard covering customers, headcount, recruitment pipeline, MRR, hiring fees/revenue, churn, time-to-hire and related sub-KPIs; integrated it into monthly and quarterly management reviews.

Created approximately 10 SOPs from scratch across billing/direct debit, recruitment and tools-acquisition/approval processes, improving process consistency and ownership across teams.

Standardised customer onboarding and billing flow from contract completion through Xero customer setup, GoCardless mandate, customer-specific Teams folders/channels, billing confirmation and invoice activation.

Built a structured customer-issue process using Microsoft Forms, ownership/status stages and Teams-based customer history, with customer-level reporting and quarterly NPS used as service-management inputs.

Improved short-term cash-flow resilience by modelling projected receipts and shifting direct-debit collection about four days earlier after customer agreement; this moved a potential roughly GBP 2,000 month-end shortfall to more than GBP 10,000 across the relevant 13-week horizon, avoiding borrowing for that gap.

Administered Microsoft 365 user lifecycle and access controls including user creation/disablement, licence assignment/removal, MFA, shared mailboxes, permissions and offboarding/sign-in controls.

Strengthened Teams/SharePoint operating governance using Teams as the company hub for communication, documentation, Planner actions, shared calendars, meeting recordings and structured management follow-up.

Created an IT-service intake workflow using Microsoft Forms and Power Automate to convert staff technology issues into Teams notifications for triage, ownership and assignment to internal or external support.

Coordinated business technology and security administration including ESET endpoint-security procurement/rollout, Keeper access management, connectivity providers, Cloudflare DNS, Plesk/IONOS/123Reg domains and hosting, SPF/DKIM/DMARC troubleshooting, website backup/recovery and SaaS renewals.

Built and supported practical automation including Make.com workflows across Pipedrive, Lemlist and ScoreApp, meeting-summary automation, Daily Huddle workflows and departmental AI updates; began n8n/Xero invoicing work without presenting it as a completed production integration.

RATTAN DIRECT | Supply Chain, Quality Control & Technical Manager | Dec 2022 - Feb 2026

UK furniture e-commerce business | Approx. GBP 8m revenue | Peak inbound about 60 containers/month | Approx. 6,000-7,000 CBM annual throughput. Employment overlapped with Optimise from Oct 2025 during handover/closure.

Owned end-to-end international supply chain and quality scope across factories, freight forwarders, 3PL warehousing, inbound planning, allocation, dispatch, final mile, reverse logistics, repairs, supplier QC, customer warranty decisions and product development for a UK business of about GBP 8 million annual revenue.

Managed five formal direct reports across China quality, returns/reverse logistics, demand planning, dispatch and supply-chain administration, with two China quality inspectors reporting through the China Quality Office Manager; supported hiring, quarterly reviews, coaching and team escalation.

Managed high-volume inbound and planning complexity with peak flow of about 60 containers in a month and roughly 6,000-7,000 CBM annual throughput, balancing demand, stock, warehouse capacity, cash, campaign timing, backorders and demurrage risk.

Ran S&OP and structured operating reviews covering annual/weekly demand, stock at sea, MOQ, storage, campaign demand, 2-week/4-week/3-month/12-month outlooks and container schedules in both value and CBM.

Negotiated and signed 3PL/service contracts covering rates, storage/picking/unloading charges, payment terms including 14-to-30-day extensions, SLAs, picking accuracy, OTIF, customer-service response, minimum volumes and penalties.

Delivered approximately GBP 520,000 in annual logistics savings through warehouse/3PL restructuring (about GBP 400,000) and last-mile optimisation (about GBP 120,000), supported by benchmarking, historical cost analysis, rate-card comparison, provider due diligence and commercial negotiation.

Led the Denholm-to-ArrowXL warehouse migration moving approximately 30 40-ft-container-equivalent loads; adjusted the cadence when the initial plan failed, used weekly escalation and completed the migration over roughly two months.

Protected a time-critical inbound movement when roughly 10 containers faced limited free time and no forwarder haulage capacity; sourced an alternative operating route through ArrowXL, coordinated warehouse intake capacity and moved all affected containers within free time.

Reduced returns from about 12% to 4% by CBM using Pareto/return-cause analysis, packaging and handling improvements, supplier finishing controls, last-mile quality reviews and stronger reverse-logistics decisions.

Strengthened supplier and product quality controls including stop-shipment/rework authority, standardising a key rattan raw-material source across multiple manufacturers, batch traceability, supplier audits, alternate-supplier sample approval and water-resistant cushion testing.

Built practical operational visibility through a shipment-tracker workbook integrating purchase orders, stock, backorders, forwarders, cash-flow/demurrage considerations and shipment movements, supported by OrderWise ERP, eDesk, ArrowXL WMS, V1 Distribution CRM, Excel and Power BI.

TILE & CARPET CENTRE LTD | Quality Team Lead | Apr 2021 - Nov 2022

Construction-products manufacturing and quality leadership environment.

Led six quality inspectors across manufacturing, roofing, pipes, tanks and recycling operations, with authority to stop production, reject finished products/raw material, require rework and block non-conforming dispatch.

Introduced quality-at-source controls through operator training and in-process checks covering cleanliness, raw material, mould condition, assembly/fastening and process-temperature controls instead of relying only on final inspection.

Reduced tank rejection from about 5% to 2% using Pareto and detailed rejection tracking by product size, machine, operator, material and cause; key drivers included contamination, temperature faults and operator discipline.

Reduced pipe rejection from about 8% to 4% by addressing surface contamination, uneven wall thickness, branding/marketing issues, recycled-material cleanliness and process control.

Reduced customer complaints from about 10% to 5% over roughly one year, using complaint data, corrective action, technical support and stronger production/warehouse quality controls.

Reduced monthly technician field-service cost from about KES 100,000 to KES 50,000 through route planning, site grouping, use of technicians already on route and fewer repeat failures - equivalent to an estimated KES 600,000 annual run-rate saving.

Maintained KEBS compliance and supported new-product introductions including audit interaction, standardisation-mark/document control, non-conformity handling and direct clarification with KEBS; also supported B2B technical presentations and completed Kalekim product training in Istanbul.

AUTO SPRINGS EAST AFRICA PLC | Quality Control Engineer | Jul 2020 - Apr 2021

Automotive-component/OEM manufacturing quality environment.

Applied APQP, PPAP, PFMEA/FMEA, Control Plans, MSA and SPC in real automotive-component production and customer-quality work, including documentation required for Isuzu-related manufacturing processes.

Created an Isuzu-required Control Plan and PFMEA/FMEA documentation covering likely process failure modes across leaf springs, wiring systems and U-bolts.

Managed production inspection, incoming/supplier quality and non-conforming material with authority to stop production and quarantine defects; prepared CAPA and Five Why reports and communicated corrective actions to customers.

Reduced U-bolt rejection from about 4% to 2% by addressing forming and flatness/wobble defects, improving operator checks and confirming the improvement through rejection-versus-total-production data.

Created work instructions, quality records and SOPs for operators across manufacturing processes including welded assemblies, CNC cutting and powder coating.

Supported ISO 9001:2015 implementation with an external implementer and worked within an environment using IATF automotive-quality requirements without overstating auditor/certification-level expertise.

COCA-COLA BEVERAGES AFRICA | Electrical Engineer | Nov 2018 - Jul 2020

FMCG production engineering, maintenance, utilities and equipment-reliability environment.

Supported production engineering across two RGB bottling lines including Sidel and KHS equipment, SACMI plastics/preform operations and supporting utility systems such as chillers, wastewater treatment, water clarification, ice production and generators.

Used SAP PM as a practical maintenance user for notifications/work orders, planned maintenance schedules, job completion, spare-parts requests/checks, equipment history and maintenance planning.

Participated in daily maintenance/production reviews covering downtime, MTTR, MTBF and other line-performance measures; supported autonomous maintenance, preventive maintenance, start-ups/shutdowns and critical-spares classification.

Worked under strict safety systems including LOTO, hazard identification, PPE and 5S, while coordinating approved contractors/vendors and validating completed work.

Restored an Endress+Hauser caustic-concentration sensor by using the manual to identify and correct a calibration issue that had kept the sensor out of service for an extended period.

Supported restoration of an older KHS crate palletising system by identifying sensor-alignment issues from the manual and coordinating with an automation specialist for a PLC reset; manual palletising had required roughly five people per shift during downtime.

SELECTED TECHNOLOGY & AUTOMATION PROJECTS

Management meeting and Daily Huddle automation - built/supporting Make.com workflows that converted recurring meeting information into structured AI-assisted summaries and operational updates for management use.

CRM and outreach workflow integration - worked with Make.com across Pipedrive, Lemlist and ScoreApp to reduce repetitive information movement and support more structured business processes.

IT service triage workflow - created a Microsoft Forms and Power Automate workflow that converted staff technology issues into Teams notifications for ownership, triage and assignment to internal or external support.

Developing n8n automation portfolio - building practical workflow projects to strengthen understanding of triggers, data transformation, APIs, JSON, webhooks, LLM processing and delivery channels; portfolio evidence is documented at github.com/vicakoyo/victor-ai-automation.

EDUCATION & PROFESSIONAL DEVELOPMENT

BSc Control and Instrumentation - Jomo Kenyatta University of Agriculture and Technology (JKUAT) - 2018 | Second Class Honours (Lower Division)

Selected credentials: ITIL 4 Foundation; Scrum Fundamentals Certified (SFC); Six Sigma Foundations; Lean Six Sigma - Define & Measure; Operational Excellence Foundations; Quality Management Foundations; SAP ERP Essential Training; PLC Level 1; SCADA Level 1; Electropneumatics Level 1; Pneumatics training; Mitsubishi VFD workshop.

RELEVANT SYSTEMS & TECHNICAL CAPABILITY

Analytics & reporting - Excel (strong), Power BI (working independently), KPI reporting, forecasting, operational cost analysis, S&OP and management reporting.

Operational systems - OrderWise ERP, ArrowXL WMS, eDesk, V1 Distribution CRM, SAP PM and Xero as practical operational/business users.

Business technology administration - Microsoft 365 user/admin functions, Teams/SharePoint governance, Power Automate service workflow, Keeper, ESET, Cloudflare DNS, Plesk/IONOS/123Reg, email-authentication/deliverability troubleshooting, connectivity and SaaS/vendor administration.

Automation & AI - ChatGPT/LLM strong user/operator; Make.com practical; n8n developing/assisted; APIs, JSON, webhooks and OAuth developing; Git/GitHub and Python beginner.
